AP JP 2003-575      The image diagnosis supporting system according to the invention is provided with a CAD 4 for MMG image for detecting the presence/absence of fine calcifying and tumor on the basis of MMG image data 2 and generating a stochastic value for the detected fine calcified part or tumor to be malignant on the basis of the feature data of the detected calcified part and tumor, a CAD 5 for US image for detecting the presence/absence of a tumor on the basis for US image data 3 and generating a stochastic value for the detected tumor to be malignant on the basis of the feature data of the detected tumor, and a total CAD 6 for calculating a total stochastic value yout by weighing stochastic values y1 and y2 with a weighing coefficient m1 for MMG and a weighing coefficient m2 for US corresponding to the combination of the contents of a signal showing the presence/absence of fine calcifying and tumor from the CAD 4 for MMG image and a signal showing the presence/absence of the tumor from the CAD 5 for US image.

Consequently, according to the image diagnosis supporting system of the invention, accuracy in diagnosis support is improved by deciding whether the same disease is benignant or malignant from a plurality of diagnostic methods.
